HANNA JACOBSSON HOSK

JUNIOR WEB/FRONTEND DEVELOPER

Enthusiastic and energetic with a love for AI, coding and learning.

EMAIL, PORTFOLIO, GITHUB, LINKEDIN

Hi, I'm Hanna, a junior Web Developer motivated by a genuine love for learning and creative problem-solving. I'm inspired by the possibilities of code and enjoy working both independently and in teams.

My foundation lies in JavaScript/TypeScript and Next.js/React, and over the past year I've been focusing on API integrations, automations, and AI-powered workflows using n8n. This includes implementing AI content generation and automating processes both in internal business operations and for clients. I have also built WCAG/Accessibility solutions and an AEO (Answer Engine Optimization) solution with integrated AI generations. In addition, I've gained experience with Webflow (particularly the CMS) and Shopify.

In my daily work, I actively use AI productivity tools like Cursor and Claude Code, applying context engineering methods, MCPs, and experimenting with building simple AI agents.
